## Grade 9 Mathematics Worksheet

## Equations

## Questions:

What is the value of $x$ in the equation $\left(2 q^{-3}\right)\left(6 q^{x}\right)=12 q^{15}$ ?

## Grade 9 Mathematics Worksheet

## Solution

$$
\begin{aligned}
& \left(2 q^{-3}\right)\left(6 q^{x}\right)=12 q^{15} \\
& \therefore 12 q^{x-3}=12 q^{15} \\
& \therefore x-3=15 \\
& \therefore x=18 .
\end{aligned}
$$

This equation contains two variables, but the one being solved is in the power.
